Institute IMDEA Networks Workshop helps researchers meet the challenges of energy efficiency

IMDEA Networks' Second Annual International Workshop, this year addressing Energy Efficiency and Networking, brought together members of the institute's Scientific Council, representatives of industry and prominent researchers.

Energy efficiency has become one of the most pressing issues for our society today, as population growth and the exhaustion of conventional energy sources make it essential that our society finds innovative ways of using power sustainably. Networking technology is no exception to this trend, with mobile telephone networks and datacenters representing significant and fast-growing consumers of power. One key to addressing the conservation challenge is effective communication between the different parties involved in the networking field. IMDEA Networks, a research institute backed by the Madrid Regional Government, helped facilitate this process with its [Second Annual International Workshop on Energy Efficiency and Networking](#), held from May 31 to June 1 in Madrid, Spain.

The Energy Efficiency and Networking Workshop brought together members of IMDEA Networks' [Scientific Council](#) with representatives of industry, academia and the research community, allowing participants to exchange technical ideas and experiences, improve their understanding of the challenges involved and home in on the most promising future approaches.

Participants from the research and academic communities included Jean-Yves Le Boudec, Full Professor at EPFL; Michael J. Bennett, Senior Network Engineer at the U.S. Department of Energy's Lawrence Berkeley National Laboratory; Jon Crowcroft, Marconi Professor of Communications Systems at University of Cambridge; and Hermann De Meer, Professor, Chair of Computer Networks and Computer Communications at University of Passau. Representatives from industry included Yvon Gourhant, R&D Program Manager at Orange Labs; Suresh Goyal, Green Research Leader at Bell Labs, Alcatel-Lucent; Thomas Hillman, Marketing Manager at Texas Instruments; and Mark A. Monroe, President of Energetic Consulting.

The presentations are to be made available online at the event's website:

About us

IMDEA Networks Institute, promoted by the Regional Government of Madrid, is a research organization on computer and communication networks whose multinational team is engaged in cutting-edge fundamental science and technology. As a growing, English speaking institute located in Madrid, Spain, IMDEA Networks offers a unique opportunity for pioneering scientists to develop their ideas. IMDEA Networks has established itself internationally at the forefront in the **development of future network principles and technologies**. Our team of highly-reputed researchers is designing and creating today the networks of tomorrow.

Some keywords that define us: 5G, Big Data, blockchains and distributed ledgers, cloud computing, content delivery networks, data analytics, energy-efficient networks, fog and edge computing, indoor positioning, Internet of Things (IoT), machine learning, millimeter-wave communication, mobile computing, network economics, network measurements, network security, networked systems, network protocols and algorithms, network virtualization (software defined networks – SDN and network function virtualization – NFV), privacy, social networks, underwater networks, vehicular networks, wireless networks and more...
